

Supplemental Requirements for Pools and Bathing Facilities

These supplemental requirements apply to pools and bathing facilities. All Entities must also comply with [Healthy at Work Minimum Requirements](#) and all Supplemental Requirements applicable to their setting and/or activities.

- All public swimming and bathing facilities shall continue to comply with the requirements of 902 KAR 10:120. Pools must be current on licensing fees and receive opening inspections from their local health department prior to reopening.
- Maximum capacity within the entire facility should be determined consistent with current Healthy at Work Minimum Requirements.
- To determine in-pool capacity, public swimming and bathing facilities must take the water surface area and divide by 50 square feet to get your maximum in-pool capacity. For instance, a 2000 square foot pool would have a capacity of 40 people ($2000/50 = 40$) to comply with social distancing requirements and the 2018 Kentucky Building Code assuming they all swim at the same time. This provision applies to facilities with or without lane lines/lane dividers and should be used to determine the number of recreational swimmers and/or the number of swimmers per lane when lane lines/lane dividers are used.
